

Getting Started on cloudLibrary Android

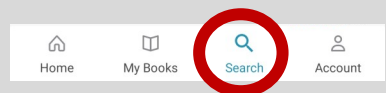

1 Install cloudLibrary from Google Play.

Open the cloudLibrary app. You will first get a welcome screen. Tap anywhere to continue.

2 Next, it will ask you to select a country. Make sure that **Canada (CA)** is selected. Tap on **Ontario** and then choose **Stormont, Dundas and Glengarry (SDG) Library** from the list of libraries.

Enter your library card / PIN and tap **Login**.

3 Next, click the "Search" button at the bottom of the screen. Enter your search term and start exploring.

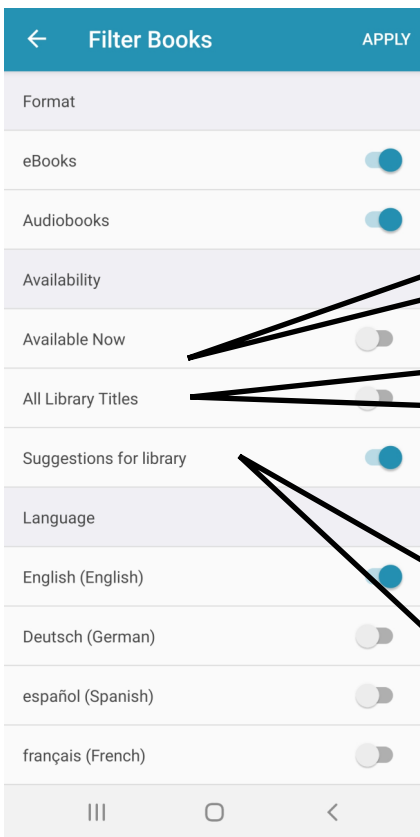

Improve Search Results Using Filters

Use the filter button to narrow your searches. Search eBooks, eAudiobooks, or both.

For "Availability", there are three options to choose from: Available Now, All Library Titles or Suggestions for Library.

Available Now: Titles you can immediately borrow.

All Library Titles: Everything SDG Library owns (including titles that are checked out).

Suggestions for Library: SDG Library titles and interlibrary loans. Choose "save for later" to have cloudLibrary notify you when the title is available to borrow in the future.
